

Introducing Canada's first data sharing resource for retail incident information analysis - Loss Prevention DataShare

The RCC LP DataShare system provides a secure national database for the collection, analysis and dissemination of aggregated incident data for serious incidents including organized retail crime, robberies, break and enters, that are reported by member companies throughout the retail industry. The goal of this initiative is to support investigative efforts while reducing the global impact of retail crime. The RCC LP DataShare system collaborates data in real time, giving members access to incidents as they are reported while offering proprietary investigative tools, analytics and reporting.

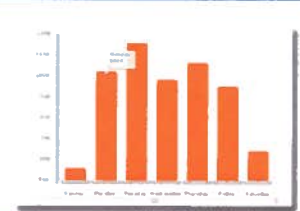

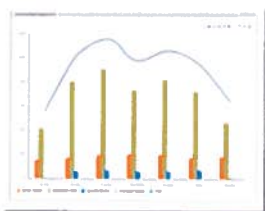

RCC LP DataShare Benefits

- Protects profitability while minimizing liability
- Provides real time, member-defined alerts
- Track incidents regardless of geographic location
- Provides a benchmark against other industry members
- Enhances your Security/LP strategies
- Helps you make well-informed decisions regarding resource allocation and purchasing
- Prepare staff with training and heightened awareness
- Enhances communications with Law Enforcement partners
- Proactive analysis for increased brand protection

RCC LP DataShare Overview

- Only retail members and law enforcement will have access to the system.
- Incidents types to include: robbery, burglary, ORC, and other types of fraud
- Access controls, system enhancements and partnership with law enforcement is driven by a Steering Committee comprised of loss prevention professionals from the retail industry
- Incident Data may be entered manually or may be imported from existing case management tools
- Members can customize alert settings and have access to reports and analytics in real time
- System includes a variety of reporting capabilities including geo-spatial mapping as well as graphs, charts and advanced link analysis functionality

Proven Technology

This DataShare technology was originally created for the retail industry in conjunction with the Retail Industry Leaders Association under the direction of many of the top retail chains in the world. It is also the same platform driving the ABA BankCAPture bank crime datashare for the banking industry and the Hospitality DataShare for restaurants, hotels and casinos.

Retail Council of Canada is excited to bring the experience and success of this technology to the retail industry. We are confident that the RCC Loss Prevention DataShare will help you better communicate loss prevention and risk management issues. We are proud to pioneer this effort and bring you these powerful analytical and investigative capabilities to help you reduce your risk and protect your brand.

Features

- On-Line internet portal for data capture and sharing of retail industry incidents
- Easy to share and contribute data with simple interface compatible with most incident management software
- All data shared remains the property of the contributing retailer and remains safe and secure
- Detailed reporting capabilities and unique link analysis tools
- Powerful analytical and investigative features to support ORC investigations
- Alerts for your property locations based on event types and geographic location
- Secure On-Line Entry – All you need is internet access and IE 5.5 or higher web browser
- Easy to use data entry screens and dashboards
- Attach digital evidence and documents to your incident, investigation or case records (pictures, scanned documents, video, pdf, etc.)
- Detailed reporting capabilities
- Work flow and automatic system alerts
- Automatically send information to the HLP! DataShare system
- ...and SO MUCH MORE!

Retail Council of Canada and Enabl-u Technologies are very pleased to provide you with an exciting tool that will help enhance your Loss Prevention, Risk and Shrink reduction efforts!
